Virus Disclaimer

Aprisma makes no representations or warranties to the effect that the Licensed Software is virus-free.

Aprisma has tested its software with current virus checking technologies. However, because no anti-virus system is 100% reliable, we strongly caution you to write protect and then verify that the Licensed Software, prior to installing it, is virus-free with an anti-virus system in which you have confidence.

Restricted Rights Notice

(Applicable to licenses to the United States Government only.)

1. Use, duplication, or disclosure by the Government is subject to restrictions as set forth in subparagraph (c) (1) (ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013.

2. (a) This computer software is submitted with restricted rights. It may not be used, reproduced, or disclosed by the Government except as provided in paragraph (b) of this Notice or as otherwise expressly stated in the contract.

   (b) This computer software may be:

   (1) Used or copied for use in or with the computer or computers for which it was acquired, including use at any Government installation to which such computer or computers may be transferred;

   (2) Used or copied for use in a backup computer if any computer for which it was acquired is inoperative;

   (3) Reproduced for archival or backup purposes;

   (4) Modified, adapted, or combined with other computer software, provided that the modified, combined, or adapted portions of the derivative software incorporating restricted computer software are made subject to the same restricted rights;

   (5) Disclosed to and reproduced for use by support service contractors in accordance with subparagraphs (b) (1) through (4) of this clause, provided the Government makes such disclosure or reproduction subject to these restricted rights; and

   (6) Used or copied for use in or transferred to a replacement computer.

   (c) Notwithstanding the foregoing, if this computer software is published copyrighted computer software, it is licensed to the Government, without disclosure prohibitions, with the minimum rights set forth in paragraph (b) of this clause.

   (d) Any other rights or limitations regarding the use, duplication, or disclosure of this computer software are to be expressly stated in, or incorporated in, the contract.

   (e) This Notice shall be marked on any reproduction of this computer software, in whole or in part.

Introduction

This section introduces the SPECTRUM Device Management documentation for Scientific Atlanta Explorer Set Top devices.

This introduction contains the following topics:

- *Purpose and Scope*
- *Required Reading*
- *Supported Devices* (Page 5)
- *The SPECTRUM Model* (Page 5)

Purpose and Scope

Use this documentation as a guide for managing Scientific Atlanta Explorer series Set Top boxes with the SPECTRUM management module SM-SFA1000. This documentation describes the icons, menus, and views that enable you to remotely monitor, configure, and troubleshoot Scientific Atlanta Explorer Set Top boxes through software models in your SPECTRUM database.

Information specific to SM-SFA1000 is what is primarily included in this document. For general information about device management using SPECTRUM and explanations of SPECTRUM functionality and navigation techniques, refer to the topics listed under *Required Reading*.

Required Reading

To use this documentation effectively, you must be familiar with the information covered by the other SPECTRUM online documents listed below.

- ***Getting Started with SPECTRUM for Operators***
- ***Getting Started with SPECTRUM for Administrators***
- ***How To Manage Your Network with SPECTRUM***
- ***SPECTRUM Views***
- ***SPECTRUM Menus***
- ***SPECTRUM Icons***
- ***SPECTRUM Software Release Notice***

Supported Devices

The SPECTRUM management module SM-SFA1000 currently allows you to model two different types of Set Top devices as described below.

Explorer 2000. Scientific Atlanta Set Top Box. Delivers digital television programming, interactive pay-per-view, interactive program guide and digital music. Supports interactive applications including video-on-demand, web browsing, e-mail, t-commerce, and enhanced TV.

Explorer 6000. Scientific Atlanta Set Top Box. This digital set-top is a home gateway to an array of new broadband-enabled wireless services including Internet access, e-mail and voice applications accessible via appliances such as wireless phones.

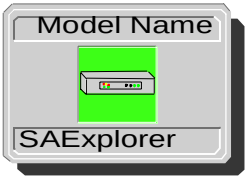
The SPECTRUM Model

The model type for the Scientific Atlanta Explorer devices is SAExplorer.

This device can only be modeled by the device type. Currently, it cannot be modeled using the IP address.

Figure 1 displays the device icon.

Figure 1: Device Icon



The device-specific Icon Subviews menu options available from the Device icon are listed below.

Table 1: Device Icon Subviews Menu

Option	Accesses the...
Tuner	*Set Top Tuner View* (Page 8)
Status	*Set Top Status View* (Page 8)
Forward Data Channel	*Forward Data Channel View* (Page 9)
Reverse Data Channel	*Reverse Data Channel View* (Page 9)
Device Information	*Device Information View* (Page 10)
Model Information	*Model Information View* (Page 11)

The rest of the documentation for this management module is organized according to view type, as follows.

- *Tasks* on Page 7
- *Icon Subviews* on Page 8
- *Model Information View* on Page 11

Tasks

This section lists device management tasks alphabetically and provides links to descriptions of the views and/or tables used to perform the task.

Channel Status (configure)

- *Channel Status* (Page 8)

Device Icons (monitor)

- *Device Icon* (Page 5)

Device Information (monitor, configure)

- *Device Information View* (Page 10)
- *Model Information View* (Page 11)

Status (monitor, configure)

- *Set Top Status View* (Page 8)

Tuner Information (configure)

- *Set Top Tuner View* (Page 8)

Icon Subviews

This section describes the device-specific views available from the Icon Subviews menu for models of Scientific Atlanta Explorer devices.

Set Top Tuner View

Access: *From the **Icon Subviews** menu, select **Tuner**.*

This view contains the following information:

Channel Status
The channel status (lock) for the FAT (Forward Application Transport). Valid values are: locked, and unlocked.

AGC Value
The AGC value of the QAM channel.

Frequency (Hz)
Read and write the FAT frequency.

SNR (dB)
The running average estimate of the magnitude of the error signals.

Discontinuity Count
The number of discontinuities detected on the MPEG transport path since the last read on the active video PID.

Video PID
Current MPEG video PID.

Audio PID
Current MPEG audio PID.

Set Top Status View

Access: *From the **Icon Subviews** menu, select **Status**.*

This view contains the following information:

OS Version
This is a string identifying the operating system version.

HW Version
A raw data dump of a hardware data structure as returned by the SA API. The current length is 16 bytes: 4:1:1:1:1:4:1:1:2 which correspond to the following devices, respectively: BIP, AC3, BGATE, BCM, TVP, MAC, QPSKRX, QPSKTX, HWconfig.

Check Sum
This returns the results of the OS checksum verification test.

Power
This identifies the power on/off status.

***Reset Set Top**
Setting this field to 1 resets the system.

Forward Data Channel View

Access: *From the **Icon Subviews** menu, select **Forward Data Channel**.*

This view contains the following information:

Frame Lock Status
This is the FDC (Forward Data Channel) frame lock status. Valid values are: locked, and unlocked.

Power Level (dBmV)
The Power Level of the FDC.

Frequency (Hz)
The current FDC frequency.

Reverse Data Channel View

Access: *From the **Icon Subviews** menu, select **Reverse Data Channel**.*

This view contains the following information:

Power Level (dBmV)
The current RDC (Reverse Data Channel) power level setting.

Range Delay
The current RDC Range delay.

Frequency (Hz)
The current RDC frequency.

Retransmissions (Hz)
The the number of RDC retransmissions.

Device Information View

Access: *From the **Icon Subviews** menu, select **Device Information Data Channel**.*

This view contains the following information:

Index
A unique value for each secure micro. The value ranges between 1 and the value of **Session Count**.

Serial Number
The serial number of the secure micro processor.

Session Count
The current number of secure interactive sessions the Secure Micro is providing.

Model Information View

This section provides a brief overview of the Model Information view.

This view displays administrative information about the device and its applications and lets you set thresholds and alarm severity for the device.

Figure 2 shows a sample Model Information view. The layout of this view is the same for all model types in SPECTRUM but some information will vary depending on the model it defines. Refer to the ***SPECTRUM Views*** documentation for a complete description of this view.
